PRE-ACTION VALUE

준비작동식밸브

준비작동식밸브 PRE-ACTION VALVE

준비작동식별브(개방형)는 건식 스프링클리시스템용 유수검지장치 로서 폐쇄형, 스프링클리해드 살비 또는 포소화살비 등에 사용됩니다. 건식 유수검지정치이므로 강추하 배관에는 보운공사가 필요없습니다. 화재시 감지기가 작동 또는 슈퍼비즈리판별 스위치를 누르면 본체에 부착된 전동 볼 밸브가 개방되어 화재를 진압합니다.

Pre-Action valve (open type) is a detection device of water leakage for dry type of sprinkfer system, it is also used for the close type and open type sprinkfer head equipment and vapor fire lighting etc. Due to the dry type water leakage detection device, 2nd piping needs no insulation work. When firing, the electric moving ball valve will be opened to discharge water by pushing the switch of supervisory panel or by sensor,

제품장점 / Product advantages

- 준비작동식밸브는 조작방식이 간단해서 유지관리가 편리합니다. Pre-action valve is easy to operate and the maintenance is convenient
- 전동 볼 밸브는 비상시에는 수동조작으로 개방이 가능합니다. In emergency , electric moving ball valve can be opened manually.
- 준비작동식밸브는 개방형으로 김지부에 의해 밸브가 작동되며 1차 개페밸브를 참그기 전까지 개방유지 됩니다. Pre-action valve is open type operated by sensor, and it could be opened until the 1st opening and closing valve is closed
